Hepatitis A is Spreading in Michigan

Talk to your pharmacist today to see if you should get vaccinated.

Who is at high risk?
The following groups are at the highest risk during this outbreak:

• Men who have sex with men.
• Persons who use injection or non-injection drugs.
• Persons currently homeless or in temporary housing.
• Persons who have been recently incarcerated.
• Persons with chronic liver disease (including hepatitis B, C, or cirrhosis).
• Persons who have been exposed to someone with hepatitis A virus infection (within two weeks of exposure) to prevent infection. This is called ‘post-exposure prophylaxis’ or ‘PEP’.

Ask your pharmacist today about hepatitis A vaccine!
The best protection is to get vaccinated; it is highly effective.
